## Conference Overview

Networking and cooperation on invasive alien species (IAS) in different scales is crucial for the prevention and management of IAS and can facilitate the implementation of existing IAS instruments, such as the EU Regulation 1143/2014 on the prevention and management of the introduction and spread of IAS, which entered into force in 2015. There are several joint regional initiatives in Europe. The **East and South European Network for Invasive Alien Species (ESENIAS)** was established in 2011 to facilitate solving IAS issues in the Balkan countries. Currently, 12 member countries and three invited countries have been involved in the ESENIAS activities: exchange and sharing of IAS information, capacity building, research, policy development and harmonisation. In 2014 the **Danube Region Invasive Alien Species Network (DIAS)** was established within the frames of Priority Area 06 of the European Union Strategy for the Danube Region, International Association of Danube Research (IAD), and ESENIAS. Countries from the Upper, Middle and Lower Danube River basin, as well as adjacent Black Sea region participate in the network. DIAS strategy and work plan have been under development. Since 2015 a joint project: *East and South European Network for Invasive Alien Species – A tool to support the management of alien species in Bulgaria (ESENIAS-TOOLS)* has been implemented. The project is funded by the Financial Mechanism of the European Economic Area 2009-2014, and aims at networking and development of IAS tools (harmonisation of definitions and standards, listing and prioritisation of alien species, data collection, database development, education) within the frame of ESENIAS to support the management of alien species in Bulgaria and in the overall region.

The ESENIAS Conference entitled '*Networking and regional cooperation towards Invasive Alien Species Prevention and Management in Europe*' will provide a forum for presentation of multidisciplinary research activities on various topics related to invasive alien species, highlighting the importance of regional cooperation for finding solutions at national, regional and European scale.
